

## How to set up Vipre Antivirus Plus Antispyware

After the program installs, a setup wizard appears. Most of the settings are pre-checked but a few are not to ensure your system is safe to go ahead with them (for example to ensure other Antivirus programs are uninstalled.)

Updates: This page is basically set up. You might want to change the how often to check for updates - by default it is set at 2 hours. However if you are on dial-up, this is not suitable and you can change it to every 24 hours.

2.Scan Options: Ensure that Enable Rootkit Detection is marked in the Scan Boxes. Put a dot in the Automatically take recommended action selection. This selection is disabled when you are in Trial Mode. Put a check mark in Make Up Missed Scans with a quick scan and adjust the time interval.

3. Active Protection - Enable Active Protection only if you have completely uninstalled any previous Antivirus program.

4. Email Protection - Ensure Enable Email Protection is activated. There should be no problems with your email programs but there is sometimes a problem with Sympatico settings. Please call us if you have any problems sending or receiving your email and we will help you adjust your settings. The other selections are optional.

5. Power - Check Wake Up From Sleep if you want your computer to be awakened from sleep to do scheduled scans.
